Github

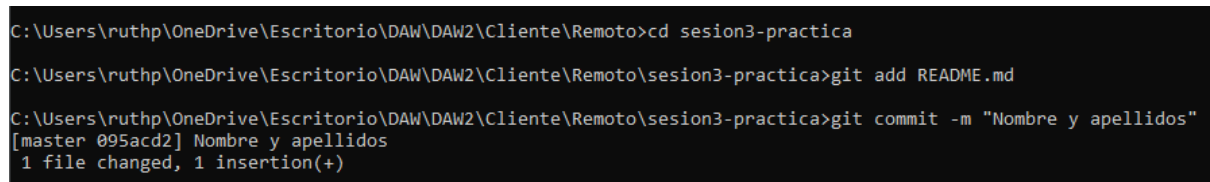

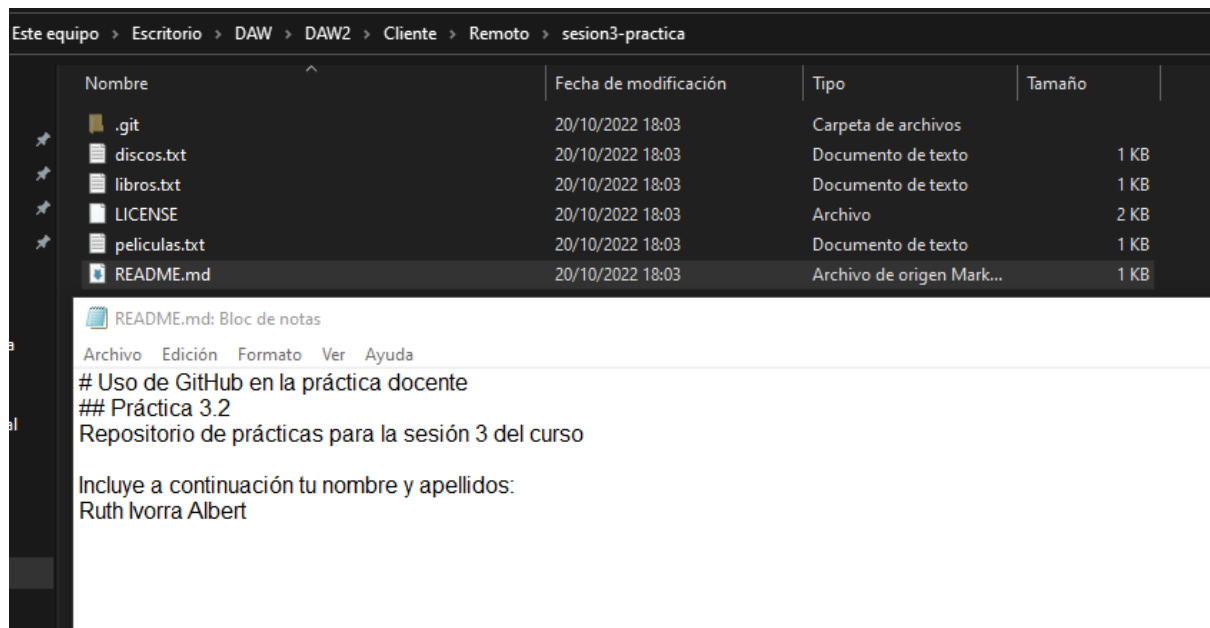

En primer lugar, desde nuestra cuenta de Github, clonamos el repositorio con un fork desde la interfaz.

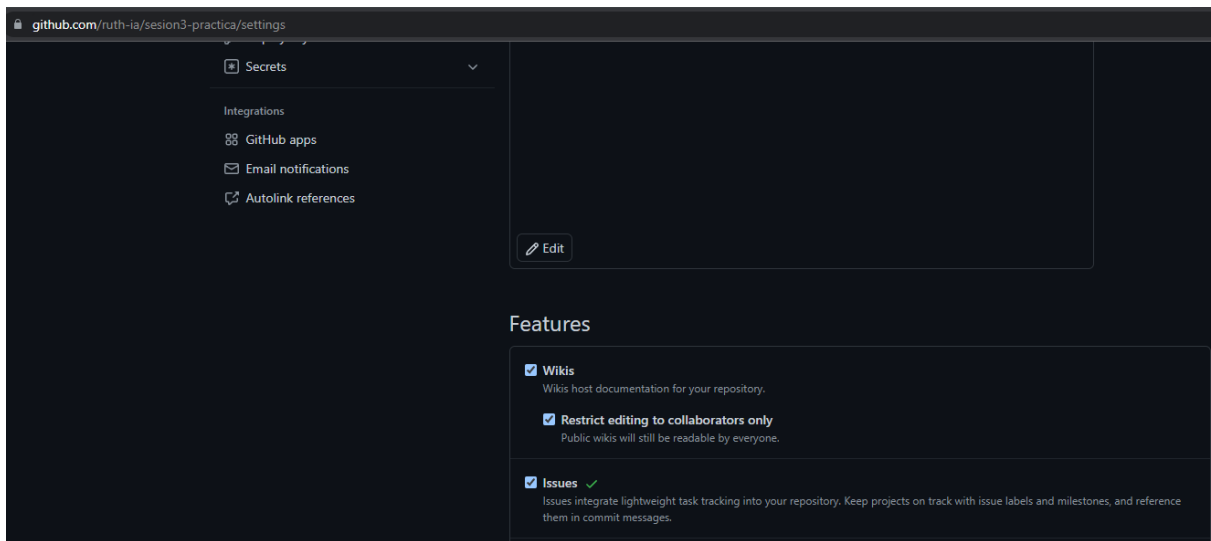

Y copiando el enlace del repositorio nuestro, lo clonamos en una carpeta local.

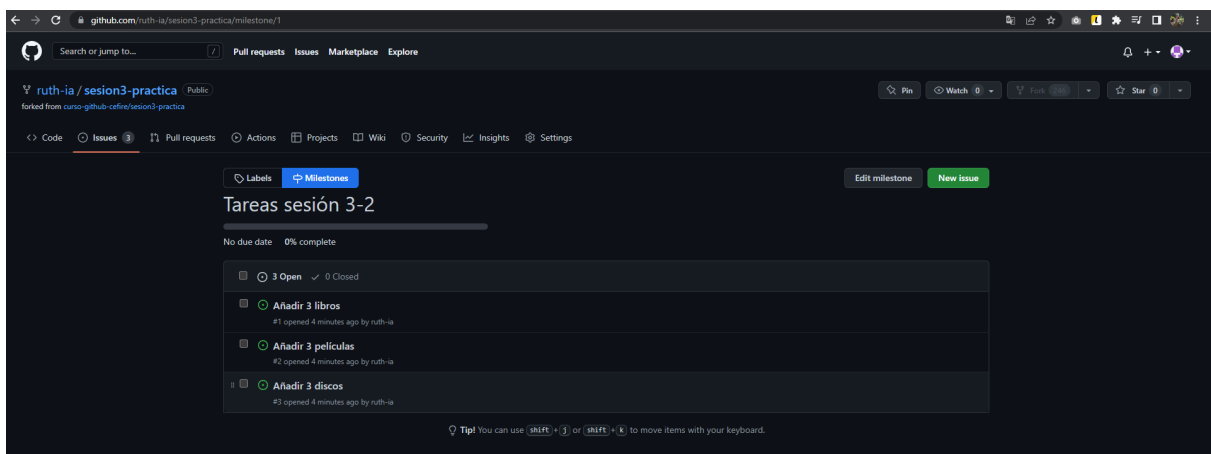

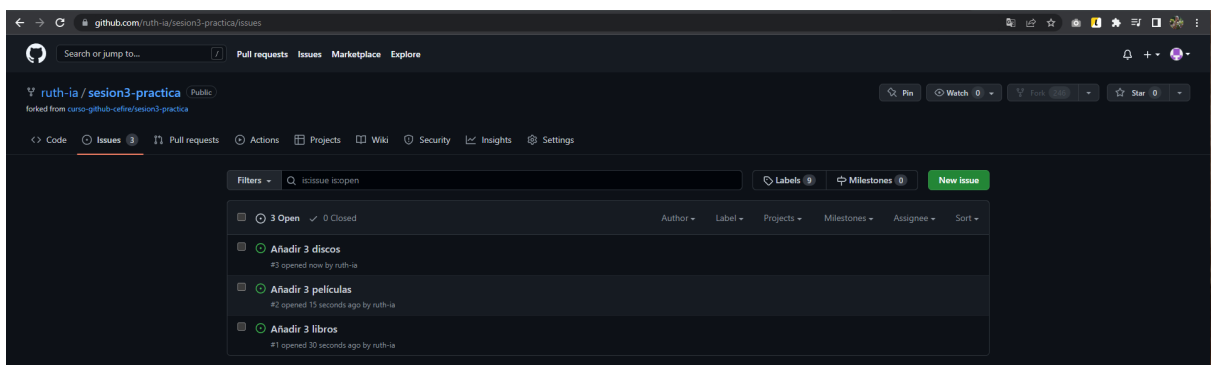

Añadimos nuestro nombre a README.dm y hacemos un commit:

Activamos la pestaña de issues para poder visualizar:

Creamos los issues y el milestone, y los enlazamos.

Añadimos 3 discos al txt correspondiente y hacemos el commit que cierra el issue.

Como resultado de la subida, se han completado las 3 tareas del milestone.

Añadimos las capturas de los cierres de issues al repositorio y pusheamos.

También añadimos esta memoria de capturas como pdf en la misma carpeta.
